

SILTA / LEARNING TEST PART I

Authored test drawing, revision A. Not a production/customer drawing. All dimensions in mm.

TOP VIEW - slot long axes parallel to Y

G54: top centre
X along 152.4 length
Y along 50.8 width
Z top = 0
Z bottom = -25.4

BLANK / FINISHED OUTSIDE: 152.4 X x 50.8 Y x 25.4 Z. Physical material: Aluminum 6061.

2 identical stepped obround slot(s). Centres (X,Y): (-48,0), (48,0).

Through slot: width 18, overall length 22, end radii R9; through full thickness.

Counterbore: width 24, overall length 28, end radii R12; depth 8 from top.

Each obround: two semicircles with centres 4 apart along Y, joined by straight sides.

Counterbore and through slot concentric. Arc centres at Y = -2 and +2.

General dimensional tolerance: +/-0.127. No other holes, pockets, fillets or chamfers.

Use a pre-sized blank; no outer-profile machining. Final edge deburring is manual, after CNC.

Drawing defines the target only. Toolpaths, entry, order and cutting parameters are agent decisions.

Purpose: test transfer across changed feature dimensions/count. Simulation must verify each new target.
